Initial Startup Process

1. Prepare Vehicle Power

- Ensure there is sufficient fuel in the tank and open the fuel valve.
- Insert the key into the ignition switch and turn it to the ON position, confirming that the instrument panel and lights illuminate.

2. Check Safety and Gear Position

Place the gear lever in Neutral (N) or Park position, and verify that the braking system is activated (press the brake pedal or pull the brake lever).

3. Press the Electric Start Button

After confirming the brake is engaged, press the electric start button to start the engine.

4. Brief Idle Warm-up

After the engine starts, let it idle for approximately 20–30 seconds, then smoothly accelerate to begin riding.

Frequently Asked Questions

1.Unable to Start or Startup Failure

Check if the battery has sufficient charge and ensure it provides normal voltage. Turn the key to the ON position, shift the gear lever to Neutral (N), press the brake, and then press the electric start button. If unsuccessful, wait a few seconds and try again.

2.Stalling After Startup or Unstable Idle

Confirm there is fuel in the tank. After starting, let the engine idle for 20–30 seconds. Inspect and clean the air filter. Replace old fuel.

3.Insufficient Power or Slow Acceleration

Check the air filter and clean or replace it if necessary. Ensure the throttle cable returns smoothly. Verify that the tire pressure is within the normal range. Avoid exceeding the vehicle's load capacity.

Initial Startup Process

1.Engine Oil Maintenance

Engine oil plays a crucial role in lubrication and heat dissipation. It is recommended to perform the first oil change after the break-in period, followed by subsequent changes every 20–30 hours or at the end of each riding season (whichever comes first). If frequently riding in high-temperature, muddy, or high-load conditions, shorten the oil change intervals accordingly. Typically, 10W40 synthetic oil is recommended. For summer use, 15W40 may be suitable, while 10W30 is preferable for winter. When changing the oil, use the dipstick to check the oil level, ensuring it is within the specified range. Add oil according to the recommended quantity to the designated level, avoiding overfilling or underfilling.

2.Battery and Electrical System Maintenance

Regularly check the battery charge and wiring connections to ensure the terminals are securely fastened without looseness. Recharge the battery periodically if the vehicle is not in use for an extended period. Inspect the main fuse, starter button, lighting system, and remote power cutoff device to ensure they are functioning properly.

Recommendations	Not Recommended
First maintenance at 186 miles or 10 hours, followed by oil changes every 497–621 miles or 20–25 hours.	Continuing to use oil for an extended period without changing it or operating with oil below the minimum level.
Clean the air filter every 10–15 hours; in dusty environments, shorten the maintenance interval.	Continuing to ride with a severely clogged air filter.
Regularly inspect the brakes, steering system, suspension, and bolt tightness.	Continuing to use brakes that are failing or tires that are severely worn.

Note: For more detailed maintenance instructions, please refer to the user manual.

Product Registration and Usage Feedback

Register Your X-PRO Vehicle

Please register your X-PRO vehicle to enable us to provide faster and more accurate service support. Registration allows us to:

- More precisely identify your vehicle and component compatibility
- Offer more efficient assistance when needed
- Archive your ownership information

Please scan the QR code below to register your product.

Share Your Story

You' re also welcome to follow us on Instagram, TikTok, YouTube, and Facebook to explore authentic stories and moments from the X-PRO community. We look forward to seeing you share a photo or short video capturing joyful times with your family and your X-PRO. Every genuine moment tells a true X-PRO story.
