Initial Startup Process

1. Check the Fuel Tank and Fuel Switch

Ensure there is sufficient fuel in the tank and that the fuel switch is in the open position.

2. Turn on the Ignition, Shift to Neutral, and Prepare

- Insert the key and turn it to "ON."
- Shift the transmission into Neutral (N), keeping both feet firmly on the ground for stability.

3. Start the Engine

For a cold start, it is recommended to open the choke first. Press the starter switch until the engine ignites, starts, and runs. Let the engine warm up for about 30–60 seconds, then close the choke.

4. Begin Riding

Manual clutch engine: Squeeze the clutch lever, shift into first gear, gradually release the clutch lever, and slowly apply throttle to complete the start and begin riding.

Frequently Asked Questions

1. Starting/Idling Issues

If the engine is difficult to start, runs unevenly, or fails to maintain idle when parked: Check and replace any dirty or damaged spark plugs; clean or replace the air filter; clean the carburetor; ensure the fuel is clean and the tank is adequately filled.

2. Chain/Transmission and Shifting Issues

If shifting is not smooth, gears are difficult to engage, or power delivery feels inconsistent: Inspect and adjust or replace the chain and sprockets; check the clutch cable and adjust the clutch free play if necessary; confirm the transmission fluid level is normal.

3. Electrical or Ignition System Faults

If there is no response when trying to start or intermittent ignition failures occur: Check the ignition coil and secure it properly; replace any damaged ignition components; inspect the main connector to ensure it is tightly fastened.

Initial Startup Process

1. Break-In Period Maintenance (First 5–10 Hours)

The first 5–10 hours of a new vehicle are considered the break-in period, which is crucial for engine longevity. During this phase, avoid prolonged wide-open throttle, high RPMs, or aggressive off-road riding. It is recommended to ride at moderate to low RPMs with varied speeds to allow the engine components to gradually wear in. After the break-in period, an oil change is advised to remove any metal particles generated during this process.

2. Oil Maintenance

Engine oil plays a vital role in lubrication and heat dissipation. It is recommended to perform the first oil change after the break-in period, followed by subsequent changes every 20–30 hours or at the end of each riding season (whichever comes first). If frequently riding in high-temperature, muddy, or high-load conditions, shorten the oil change intervals accordingly. Typically, 10W40 synthetic oil is recommended. 15W40 may be suitable for summer, while 10W30 is preferable for winter. When changing the oil, use the dipstick to check the oil level, ensuring it falls within the specified range. Add oil according to the recommended quantity to the designated level, avoiding overfilling or underfilling.

Recommendations	Not Recommended
In dusty off-road conditions, check the air filter every 5–10 hours, and ensure it is completely dry after cleaning before reinstalling it.	Continuing to ride with a dirty air filter after riding in dusty environments or installing it without allowing it to dry completely.
Regularly check the charge of the 12V battery, and recharge it every 2–4 weeks during extended periods of inactivity.	Leaving the battery uncharged for an extended period can cause deep discharge.
Before riding, check the brake feel and tire pressure. After off-road riding, clean any mud or sand from the brake components.	Continuing to ride with faulty or loose components.

Note: For more detailed maintenance instructions, please refer to the user manual.

Product Registration and Usage Feedback

Register Your X-PRO Vehicle

Please register your X-PRO vehicle to enable us to provide faster and more accurate service support. Registration allows us to:

- More precisely identify your vehicle and component compatibility
- Offer more efficient assistance when needed
- Archive your ownership information

Please scan the QR code below to register your product.

Share Your Story

You're also welcome to follow us on Instagram, TikTok, YouTube, and Facebook to explore authentic stories and moments from the X-PRO community. We look forward to seeing you share a photo or short video capturing joyful times with your family and your X-PRO. Every genuine moment tells a true X-PRO story.
