Initial Startup Process

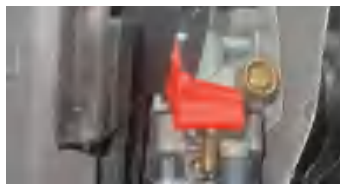

1. Safety and System Check

- Ensure the go-kart is placed on flat ground.
- Confirm that the engine kill switch / ignition switch is in the "RUN" position, and check that there is sufficient fuel.

2. Fuel and Choke Preparation

- Press the primer bulb on the carburetor several times until there are no air bubbles in the fuel line.
- For a cold start, close the choke by moving it **upward** to enrich the fuel mixture, making the engine easier to ignite.

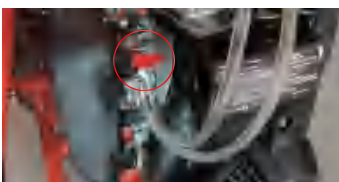

3. Pull-Start Ignition

Grip the recoil starter handle firmly. Pull it slowly until you feel resistance, then give a quick, smooth, and forceful pull to start the engine (be careful not to over-extend the starter rope).

4. Stabilize Engine Operation

After the engine starts, gradually open the choke by moving it **downward**, and let the engine idle briefly before pressing the throttle to drive.

Frequently Asked Questions

1.Failure to Start

Confirm that 87+ octane gasoline has been added to the fuel tank. Press the carburetor primer bulb several times until there are no air bubbles in the fuel line. Ensure the ignition switch and emergency stop switch are in the ON position. For a cold start, flip the choke upward to the closed position, then quickly and firmly pull the starter rope until the engine starts. Within 30–60 seconds after starting, flip the choke downward to the open position. If the engine still cannot start after a long time, check the spark plug connection, ignition coil plug, and whether the fuel line is normal.

2.Stalling Shortly After Starting

After starting, keep the choke closed and let the engine idle for 30–60 seconds. Gradually open the choke while avoiding immediate throttle application.

3.Weak Braking Performance

Press the brake firmly and test the braking effect in advance. Check whether the rear disc brake is functioning properly. If the brakes are ineffective, stop using the vehicle immediately.

Initial Startup Process

1.Quick Pre-Ride Daily Check

Before each ride, walk around the vehicle and check whether the front and rear tires are underinflated, have punctures, or show abnormal wear. Press the brake pedal to confirm normal braking force and travel.

2.Engine and Fuel Maintenance

Use clean, fresh gasoline and avoid storing old fuel for long periods. Regularly check the engine's operating condition to maintain a stable idle. If the vehicle will not be used for an extended time, either drain the fuel or start the engine periodically and let it run for a few minutes to keep the system functioning properly.

Recommendations	Not Recommended
Pre-start checks: fuel level, fuel valve, and switches. When the engine is cold, use the choke and let it idle to warm up first.	Starting or riding without inspection, or applying full throttle immediately when the engine is cold.
Before each ride, check the brakes, throttle, chain, and the tightness of all screws on the vehicle.	Continuing to use the vehicle while ignoring looseness, unusual noises, or weak brakes.
Regularly tighten screws, lubricate the chain, use fresh fuel, and keep the vehicle clean.	Long-term neglect of maintenance, using old oil, or failing to keep the vehicle clean, leading to accelerated wear of components.

Note: For more detailed maintenance instructions, please refer to the user manual.

Product Registration and Usage Feedback

Register Your X-PRO Vehicle

Please register your X-PRO vehicle to enable us to provide faster and more accurate service support. Registration allows us to:

- More precisely identify your vehicle and component compatibility
- Offer more efficient assistance when needed
- Archive your ownership information

Please scan the QR code below to register your product.

Share Your Story

You ' re also welcome to follow us on Instagram, TikTok, YouTube, and Facebook to explore authentic stories and moments from the X-PRO community. We look forward to seeing you share a photo or short video capturing joyful times with your family and your X-PRO. Every genuine moment tells a true X-PRO story.
